Geelong Pest Control now
use the most advanced
termite detection
technology in the world.***

TERMATRAC™

www.geelongpest.com.au

Introducing the Termatrac®T3i

Introducing the one and only Termatrac®T3i - the only device that detects, confirms and tracks the presence of termites.

Radar

The unique termite detection radar does what no other detector has ever been able to do. It sends out radar through most common wall materials that locates and tracks the presence of termites, without the need for tapping or drilling holes in the walls for easy and accurate treatment.

Moisture

The moisture sensor confirms that conditions need further investigation. The moisture component enables the Geelong Pest Control technician to easily identify areas of excess moisture as a possible risk area for termites. The moisture sensor is so sensitive it can even pinpoint rising damp.

Thermal

The Termatrac T31 remote thermal sensor with built-in laser pointer shows changes in surface temperature; a common sign of termite infestation.
